Abstract (en)
[origin: EP3466601A1] A method for manufacturing a profile member (1) for a suspended ceiling system, comprising forming a sheet metal material into an elongate T-shaped profile member (1) with a web (2) having two web side walls (7a, 7b) and a pair of oppositely disposed flanges (3) projecting from a bottom portion (4) of the web (2), and laser welding the elongate T-shaped profile member (1) for providing a laser weld joint (8) extending in a longitudinal direction (L1) of the T-shaped profile member (1) and joining the two web side walls (7a, 7b) to each other. The step of laser welding comprises alternately performing a first operation and a second operation, the second operation being different from the first operation, whereby a laser weld joint (8) is provided comprising along its extension alternating welded first sections (11) associated to the first operation and second sections (12) associated to the second operation. The present invention also relates to an elongate profile member provided with a laser weld joint (8).
