Abstract (en)
The invention relates to a method for washing laundry in a laundry washing machine (1) of the type comprising a washing tub (3) enclosing a rotatable washing drum (4) adapted to receive laundry to be washed, and an electric motor (40) connected to said washing drum (4) for rotating said washing drum (4); the method comprising at least a spinning phase to extract liquid from said laundry during which said washing drum (4) is rotated by means of said electric motor (40), wherein said spinning phase comprises the steps of: a) activating said electric motor (40) to bring the rotating speed (Ws) of said washing drum (4) up to a target rotating speed (Wst); b) rotating said washing drum (4) at said target rotating speed (Wst); c) monitoring at least one parameter relating to the electric power (P) absorbed by said electric motor (40); d) terminating said spinning phase when said at least one parameter decreases at a decreasing rate (Dpr) which is below, or equal to, a minimum threshold value (##Pr).
