Abstract (en)

[origin: WO2017210711A2] The invention relates to a stamp (1), a belt drive (23), a bridge (21), a driver (20) and a drive unit (18), in particular a mounted band set unit (18), preferably for a belt drive (23) in an application unit (3) for a stamp (1), comprising at least one adjusting wheel (19) with a driver (20) and a so-called bridge (21), wherein a belt (22) is fastened via the driver (20) and around the bridge (21). Upon actuation of the adjusting wheel (19), the belt (22) is adjusted via the driver (20). The driver (20) of the belt drive (23) is made of at least two different materials, in particular of a two-component injection molding component (29,30), wherein the outer component (30) bearing on the belt (22) or conveyor belt (22) has a small thickness (31) of preferably less than 1.5 mm, in particular of 0.4 to 0.8 mm.
