Abstract (en)

[origin: WO2017211495A1] The invention relates to a method for operating an electromechanical brake device, wherein the rotational motion of the electric brake motor (3) is transmitted to the brake piston (16) by means of an axially movable transmitting element (15). For the case that the brake piston (16) lies at a distance to an associated brake pad (17, 18), a hydraulic brake pressure is produced in a hydraulic vehicle brake (1).
