Abstract (en)

[origin: WO2017216446A1] The present invention relates to a cross-linkable adhesive composition comprising at least one cross-linkable silylated polymer and at least one cross-linking catalyst obtained by reacting a metal alkoxide and an oxime. The invention also relates to the use of a metal compound obtained by reacting a metal alkoxide and an oxime as a catalyst for cross-linking silylated polymers.
