Abstract (en)

[origin: WO2017211370A1] A tent system comprising a fly sheet (109) and an inner tent (111), wherein said system further comprises at least one guy element for securing said fly sheet to said inner tent, wherein said guy element is for interconnecting said fly sheet and said inner tent and is adapted to be connected to said inner tent at a second point of connection (101b) and said fly sheet at a first point of connection (101a); The guy element comprises between said first and second point of connection: - a stretchable flexible rubber ring (103) for providing flexibility to said guy element and - a stretch-limiting element (105) for limiting the amount of possible stretching of said stretchable flexible rubber ring, Thereby a flexible connection can be obtained between a fly net and an inner tent which, due to the stretch-limiting element, can withstand even extreme weather conditions without breaking.
