Abstract (en)

[origin: WO2017212133A1] The present invention relates to an anti-theft device, made up of two hingedly connected portions, each having a peripheral skirt (101, 201) provided with an edge capable of abutting under said peripheral shoulder (102, 202). The portions (101, 102) are made up of a stationary shell (200) and a movable shell (100) connected by a pivot (250), the stationary shell (200) having a recess (205) opening laterally to allow the insertion of the movable shell (100) in closed position, the mobile shell (100) being made up of a body having a cross-section that matches the cross-section of the item to be protected, extended on the side of the item (1) to be protected by a skirt (101) stretching over a first half of the periphery of the item to be protected and having a peripheral shoulder (102).
