Abstract (en)

[origin: WO2017211592A1] The invention relates to a method for producing a honeycomb structure comprising at least one at least partially structured metal film, wherein the metal film is arranged in partial regions of the honeycomb structure in such a way that it is kept electrically isolated at a distance from an adjacently arranged metal film by an air gap, at least comprising the following steps: a. providing the at least one metal film; b. providing a forming plate with a supporting surface and at least a first web structure, extending in an axial direction from the supporting plate, wherein the first web structure also extends in a plane parallel to the supporting surface and forms an image of the air gap to be produced in the honeycomb structure; c. arranging the at least one metal film on the supporting surface in the first web structure.
