Abstract (en)
[origin: WO2017215848A1] The present disclosure relates to a light emitting module, comprising: a circuit board on which a light emitting element is arranged; a lens assembly arranged on the circuit board to cover the light emitting element; and a housing made of a molding material and at least partially surrounding the circuit board and the lens assembly to form the light emitting module, wherein a fastener for firmly retaining the lens assembly to the housing is formed by the molding material while forming the housing using the molding material. The present disclosure also relates to a method for producing the light emitting module. The light emitting module according to the present disclosure can firmly retain the lens assembly by a housing made of a molding material. In addition, the light emitting module has advantages such as a simple production process, a compact structure, a low cost and so on.
