Abstract (en)

[origin: WO2017211821A1] The present invention relates to a refrigerator comprising a cabin (1) with thermal insulation; an inner lining (10) that surrounds the inner section of the cabin (1) so as to define a refrigeration chamber; a sensor (20) that is directly disposed on the inner lining (10); a fan casing (40) that covers a fan (50) positioned on a rear wall (11) of the inner lining (10) away from the sensor (20), so as to allow radial air flow, wherein an air blocking element (30) is provided in the part of the fan casing (40) facing the sensor (20) so as to at least partially block the cooling air that is accelerated by the fan (50).
