Abstract (en)
[origin: WO2017215782A1] The invention provides a card device, configured to receive a loading package for an applet and to execute an INSTALL command and to apply it to the loading package in order to prompt installation of an instance (App let Instance Object 1) of the applet in the card device, wherein the INSTALL command is configured to set up in the card device an application identifier (AID1) that is included in the loading package and relates to that instance of the applet which is to be installed, characterised in that the INSTALL command is configured: – to install the applet instance taking into consideration the application identifier; and – to set up in the card device at least one further application identifier (AID2,...) that relates to the same instance of the applet.
