Abstract (en)

[origin: WO2018024443A1] The invention relates to an arrangement (1) and a method for anchoring high-voltage switching devices, comprising at least one support (2) and at least one switching head (3), wherein at least one long-rod insulator (4) for anchoring the high-voltage switching device is provided. The at least one long-rod insulator (4) is preloaded in particular to tension, whereby the high-voltage switching device is held mechanically stable, in particular in the event of earthquakes.
