Abstract (en)

A wall unit (100) comprises: walls (1), at least one support surface (2) and one actuating unit (3) to actuate the support surface (2); the actuating unit (3) comprises: a mobile frame (4) and a lever mechanism (5) of parallelogram type, comprising at least one pair of levers (50, 51) that are directly or indirectly connected to a wall of the wall unit (100) and to the mobile frame (4) to roto-translate said mobile frame (4) relative to the walls of the wall unit (100), in such a way that said mobile frame (4) can be in a raised position, wherein the mobile frame (4) is inside the compartment (10), and a lowered position, wherein the mobile frame (4) is outside the compartment (10) and is at least partially disposed in lower position relative to a bottom wall of the wall unit (100).
