Abstract (en)

In a first aspect, the invention concerns a method for providing a varnish coating to individual sheet substrates, said method comprising the steps of applying a liquid coating composition to the upper surface of a sheet substrate, conveying said sheet substrate along a track, while supporting the substrate from its rear surface, and subsequently curing and/or drying said coating composition. In particular, the aforementioned track is at least partly curved. In a second aspect, the invention relates to a device for performing such a method.
