Abstract (en)

The present disclosure relates to a resealable packaging (100) for sliced food products comprising a first portion (120) formed from a first laminate material comprising a core layer comprising adhesive and a heat sealable layer connected via a heat seal to a second portion (110) formed from a second material so as to form a sealed compartment. The second portion (110) contains a removable portion (200) that may be removed taking with it part of the heat seal (130) to reveal the adhesive (122a), which then allows the enclosure to be resealed. The second portion (110) preferably contains a zone of weakness (115) separating the removable portion (200) from the remainder of the second portion, to allow the removable area to be easily torn away. The disclosure also relates to a method of opening and resealing such a resealable packaging, and also a method of forming the resealable packaging.
