Abstract (en)

[origin: WO2017215717A1] Disclosed is a protective device(1) comprising a container part (2) formed by a water impermeable material, wherein the container part (2) includes at least one container opening (3). The protective device(1) further comprises a tubular fixation device (4) formed by an elastic water impermeable material, wherein a first end (5) of the fixation device (4) is connected to the container part (2) at the container opening (3) and wherein a second end (6) of the fixation device (4) comprises an edge portion (7) encircling a protective device opening (8) enabling access through the tubular fixation device (4) and into the container part (2). Furthermore, the tubular fixation device (4) comprises at least one tear zone (9) arranged at the edge portion (7). A method for removing a protective device(1) from a limb (12) and use of a protective device (1) is also disclosed.
