Abstract (en)

[origin: WO2017215996A1] The invention relates to a method for securing at least one machine tool (10), in particular a portable power tool, wherein at least one location characteristic value of the machine tool (10) is evaluated in at least one step (12). According to the invention, the machine tool (10) is activated in accordance with at least one operator-specific characteristic value in at least one step (14).
