Abstract (en)

[origin: US2017361966A1] Among other things, there is shown a system for filling vials with fluid that maintains a localized sterile zone around the filling location. In particular embodiments, the sterile zone is provided by a manifold having an internal space to which clean air is supplied. One or more filling assemblies are attached to the manifold. Vials enter the sterile zone and are filled within it. Additional structure, such as coverings for vials, are disclosed to assist in maintaining sterility.
