Abstract (en)

[origin: WO2017215934A1] The invention relates to an apparatus (1) for destacking and separating flat material, to a belt cassette (5) for such an apparatus and to a corresponding method. In order to create an apparatus and a method which provide particularly straightforwardly for adaptation of the apparatus to different formats of flat material, wherein the apparatus should also be particularly straightforward to maintain and, in the event of a defect being found, can be rendered operational again particularly quickly, provision is made for the apparatus to have a drive unit (2), a drive shaft (3), which interacts with the drive unit, and at least one ejecting belt (4), which can be driven via the drive shaft, the ejecting belt being arranged on a modular belt cassette (5).
