Abstract (en)

[origin: WO2017217846A1] The invention relates to a panel for a drainage box, the panel comprising a central portion comprising one or more openings for passage of liquid therethrough; side portions surrounding the central portion; and at least one connection element on each side portion, each connection element comprising a receiving portion and a protruding portion, the receiving portion shaped complementary to the protruding portion, such that a second panel having a similar connection element can secure to the first panel by connecting through engaging the respective connection elements, such that the protruding portion of the connection element of the first panel fits into the receiving portion of the connection element of the second panel, and the receiving portion of the connection element of the first panel receives the protruding portion of the connection element of the second panel.
