Abstract (en)

[origin: WO2017220933A1] A method implemented in an electronic entity capable of implementing a plurality of applications comprises the following steps: - detecting an electrical signal (D; D'); reading, in a memory of the electronic entity, information relating, among said plurality of applications, to a previously selected application; - transmitting a command (CMD) to deliver an indication associated with the application to which the read information relates. An associated electronic entity is also described. Figure
