Abstract (en)

[origin: WO2017215997A2] The invention relates to a method for the transmission, in particular wireless transmission, of electronic data between at least two connection partners, in particular between a hand-held power tool (10) and an external unit (12). According to the invention, at least in one method step (14), a data connection is established, in particular automatically established, between the connection partners depending on a comparison of characteristic movement variables of the connection partners.
