Abstract (en)
[origin: US2019121295A1] The invention concerns a device for attaching a bracelet or strap to a watch case, the device comprising, on the one hand, a bar secured to the watch case by means of at least one horn, and on the other hand, an insert integral with the end of the bracelet, wherein the bar and the insert are complementary to cooperate by interlocking or fitting with each other to form removable assembly means able to make the bracelet interchangeable. According to the invention, the bar is formed by a cylindrical shaft having a flat portion, the flat portion being arranged to cooperate by interlocking or fitting with at least one housing made in the insert, the housing having a substantially rectangular opening for receiving the flat portion, the shaft being telescopic to move from a first position A, in which the insert is positionable on the shaft, to a second position B, in which the insert is locked on the shaft.
