Abstract (en)  
The invention deals with a cabinet comprising: a housing (2), a first drawer (4a) arranged to slide relative to the housing (2) between an open position and a closed position, a first snap fit lock mechanism for locking automatically the first drawer (4a) to the housing (2) when the first drawer (4a) reaches the closed position, so as to retain the first drawer (4a) in the closed position, and an actuator (64, 65) for causing the first snap fit lock mechanism to unlock the first drawer (4a) from the housing (2), so as to allow the first drawer (4a) to leave the closed position.
