Abstract (en)

A cooking apparatus (4) with filtering assembly (3) includes a base (41) having a cooking area (42) disposed thereon, an intake cover (43) facing the cooking area (42), a filtering assembly (3) and an exhaust fan (44) disposed within the base (41) respectively. The filtering assembly (3) includes a collecting case (31) having a room (31A) with a large space and a filter (32) disposed in the room (31A) for dividing the collecting case (31) into a discharge area (311) and a filtering area (312), thereby allowing the extensively-disposed filter (32) to increase an area available of filtering dirt and oil in fumes and decrease the wind resistance. A collecting trough (313) is formed on a bottom of the collecting case (31) for gathering the dirt and oil to prevent the filter (32) from getting obstructed. The discharge area (311) accommodates the filtered fumes temporarily and releases the filtered fumes gradually to reduce air extrusion. Therefore, the filtering efficiency is increased.
