Abstract (en)

[origin: EP3474262A1] The invention relates to a decorative or advertising support for decorating exteriors at parties and events, and a method for the production thereof. The support is formed by a frame (1) having an externally and internally trimmed or cut-out shape of the pattern or figure designed, which supports a mesh or lattice (2) with holes that are sufficient for the wind to flow therethrough, and with a surface that is directly illuminated by a strip of LEDs (3) installed in the internal peripheral edge of said frame (1), with said LEDs being oriented towards the mesh or lattice (2), with an external metallic structure (5) functioning as a reinforcement, and with both the mesh or lattice (2) and the frame (1) being painted or decorated, without the paint closing the holes of the mesh. The production method involves: the selection of a design functioning as a frame (1); the cutting out thereof; the installation of a strip of LEDs (3) oriented inwards; the securing of a mesh or lattice (2) to the frame (1), the holes of which allow the wind to flow therethrough; and the painting and framing.
