Abstract (en)

[origin: WO2018001716A1] The invention relates to a wet-cleaning appliance (1), in particular a wet mop, having a cleaning roller (2), which is mounted in a rotatable manner about a roller axis (3), and having a roller cover (4), which encloses the cleaning roller (2) in the circumferential direction, at least in part, and has at least one displaceable covering element (5) for optionally closing and/or releasing an opening region (6) of the roller cover (4). In order to create a wet-cleaning appliance (1) which, as far as the user is concerned, can be transferred in a particularly convenient and reliable manner from mopping operation to regeneration operation, it is proposed that the displaceable covering element (5) should be coupled to the cleaning roller (2) by a gear mechanism (7), in particular a toothed gear mechanism, such that the cleaning roller (2) can be displaced by virtue of the covering element (5) being displaced or the covering element (5) can be displaced by virtue of the cleaning roller (2) being displaced. A method for operating a wet-cleaning appliance (1) is also proposed.
