Abstract (en)

[origin: WO2018002490A1] Fluid product dispenser comprising a dispensing member (1), such as a pump, a dispensing head (14), such as a fluid-product applicator, and a reservoir of fluid product (2) which is connected in a sealed and removable manner to the dispensing member (1), characterized in that sealing between the dispensing member (1) and the fluid product reservoir (2) is achieved by coaxially sliding sealed radial contact which is broken when the fluid product reservoir (2) is disconnected from the dispensing member (1), so that the fluid product reservoir (2) is connected in a sealed manner to the dispensing member (1) over a range of determined axial height.
