Abstract (en)

[origin: WO2017221125A1] The present invention relates to a device for bending material, wherein the device comprises adjusting means to adjust the width of the mould. The adjusting means comprise a plurality of adjusting slats which are movable in the longitudinal direction. The adjusting slats are carried out such that by displacing a number of the adjusting slats, each time, one of the adjusting slats forms a stop for the corresponding outer walls of the corresponding mould half.
