Abstract (en)

[origin: WO2018001577A1] In an installation (A) for the treatment of containers (B), having at least one filling station (F) and a packing station (P) that processes film or blank-form packing material (FP, ZP) and has working components that act on the packing material and form packages, at least one measuring device (M1, M2) for determining dimensional deviations of filled containers (B), and a controller (CU) for automatically adjusting at least one installation station depending on a determined dimensional deviation, working components that act on the packing material (FP, ZP) during the packaging of the filled containers (B) are automatically adjustable in the packing station (P) via the controller (CU). In a method for packaging filled containers, working components of the packing station that act on packing material (FP, ZP) are adjusted automatically depending on measured dimensional deviations, in order to form packages of different dimensions with at least substantially the same packing density.
