Abstract (en)

[origin: WO2017220067A1] The invention relates to a storage container (100) for food formed by at least one upwardly open base body made of a hard plastic, having at least one peripheral cover support edge (12, 22) and being divided into at least two half-shells (10, 20). The storage container (100) is characterised in that the half-shells (10, 20) are pivotally connected to one another via a joint strip (30), and in that the cover support edge (12, 22) extends over the common outer perimeter of the connected half-shells (10, 20) and is interrupted at the respective end sides of the joint strip (30). On each half-shell (10, 20) of the storage container (100), at least one elastomeric sealing web (31, 32) is formed between the ends of the interrupted cover support edge (12, 22).
