Abstract (en)  
[origin: WO2017220303A1] The invention relates to a feed device (110) for the controlled feeding of an elongate, in particular thread-like, wire-like or tape-like medium (160), to an embroidery machine (180), in particular a Schiffli embroidery machine (180), containing a drive member (112); a spindle (113), which is rotatable relative to the drive member (112), for holding a bobbin (161), with the medium (160) wound thereon, for conjoint rotation; torque transmission means (114, 115) for transmitting a torque between the spindle (113) and the drive member (112), wherein the medium (160) is able to be unwound from the bobbin (161) counter to the torque. Furthermore, the invention addresses the use of at least one such feed device (10; 110) for the controlled feeding of an elongate medium (160), in particular a thread-like, wire-like or tape-like medium (160), in particular a soutache medium (160), to an embroidery machine (180), in particular a Schiffli embroidery machine (180). Moreover, the subject of the invention is an embroidery machine (180), in particular a Schiffli embroidery machine (180), containing at least one such feed device (110) for the controlled feeding of an elongate medium (160), in particular a thread-like, wire-like or tape-like medium (160), in particular a soutache medium (160).
