Abstract (en)  
[origin: WO2018054690A1] The invention relates to a device (1) for assembling and disassembling a component (11) of a gas turbine (10), comprising a rail system (20) with at least two running rails (21). A carriage (30) which can be pushed on the running rails (21) along a specified movement axis (VA) is provided on the running rails (21), and the carriage (30) has a securing device (31) which is designed to secure a fitting section (41) of a first carriage insert (40) in a force-fitting manner such that the first carriage insert (40) is moved together with the carriage (30) when the carriage is moved on the running rails (21).
