Abstract (en)

[origin: WO2018036751A1] The invention relates to a controller, a system having such a controller and a method for operating such a system, wherein a local position of a rail vehicle is ascertained, wherein a first installation position of a first signal installation, the local position, the maximum capture range of a camera and the points setting of nearest points are taken as a basis for ascertaining an orientation of the camera to the first signal installation, and wherein the ascertained orientation is taken as a basis for controlling the camera tracking device and directing the camera at the first signal installation.
