Abstract (en)
[origin: CN109700162A] The invention relates to a chest strap. The present invention relates to a back-carrying article equipped with a first strap and a second strap, comprising an adjustment system which comprises an upper strap; a lower strip; a first hanging part used for being fixed on a strap and fixedly connected with the upper strip-shaped object; a second hanging part used for being fixed on a strap and fixedly connected with the lower strip-shaped object; a third hanging part which is used for being fixed to the first strap, is fixedly connected with the upper strip-shaped object and the lower strip-shaped object and comprises a first adjusting device capable of adjusting the relative position of connection between the upper strip-shaped object and the third hanging part and a second adjusting device capable of adjusting the relative position of connection between the lower strip-shaped object and the third hanging part. Each strap is provided with a fixing part; the first and/or second hooking parts are detachably mounted on one of the fixing parts, so that the vertical positions of the first and/or second hooking parts can be adjusted.
