Abstract (en)

[origin: CN109706614A] The invention relates to a yarn guide bar driving device and a yarn guide bar assembly of a warp knitting machine. The invention relates to a yarn guide bar drive (6) of a warp knitting machine, in particular to a yarn guide bar drive (6) of a warp knitting machine, comprising a motor assembly (8), which has a rotationally driven drive element (12), which has an axis of rotation and which interacts with a drive pushrod (5). It is desirable that one yarn guide bar can be controlled independently with low cost in the offset direction. According to the invention, an effective connection between the drive element (12) and the drive pushrod (5) is arranged eccentrically to the axis of rotation.
