Abstract (en)

A variable displacement compressor having a housing (10) enclosing a crank chamber (36), a suction chamber (20), and a discharge chamber (22); a plurality of cylinders (16) provided in the housing (10); a drive shaft (34) rotatably supported in the housing (10) and having a driving flange (32) connected thereto; a swash plate (24) arranged on the drive shaft (34) so as to have an adjustable inclination angle relative to a plane perpendicular to the drive shaft (34); a plurality of pistons (18), each of which is slidably disposed within one each of the cylinders (16); the pistons (18) being coupled to the swash plate (24) so as to reciprocate within the cylinders (16) with a stroke depending from the inclination of the swash plate (24); and an engagement structure (30) for connecting the swash plate (24) to the driving flange, is characterized in that the engagement structure (30) comprises at least one groove (42) and two projections (46), the projections (46) being formed integrally with at least one male arm (44) associated with the swash plate (24) or the driving flange and engaging into the at least one groove (42) associated with the driving flange (32) or the swash plate (24).
