Abstract (en)

[origin: WO2018004490A1] Shortcomings in the transdermal delivery of a dispersion of fixed and/or essential plant oils are overcome by using an aqueous extraction of a saponin plant to enhance dispersion of fixed and/or essential oils and to enhance transdermal delivery of a composition including the oil dispersion of a target plant. In one embodiment, a composition for transdermal delivery comprises an oil in water emulsion having an oil of a target plant dispersed in a dispersion medium. The dispersion medium includes soluble components of a saponin plant solvated in water, and the saponin plant and the target plant are different plants or types of plants. Products including the composition for transdermal delivery, and methods of preparing and using the composition are also described.
