Abstract (en)

[origin: WO2018000002A1] The invention relates to an umbrella (1), in particular for protection from the sun or rain, which is provided with a swing-open rod assembly (4) provided with a cover (5) and mounted movably on a central pole (2) of the umbrella (1), wherein a movement of the rod assembly (4) can shift the cover (5) from a folded-together position into an opened-out position, and the central pole (2) is mounted on an anchoring device (6) in the ground (7). According to the invention, the umbrella (1), in the folded-together state, can be retracted into a bearing device (8) arranged in particular at least in part in the ground. Furthermore, a bearing device (8) for such an umbrella (1) is formed from an in particular box-like element, in which an anchoring device (6) of the umbrella (1) is mounted or accommodated in an adjustable manner, wherein the bearing device (8), with the umbrella (1) accommodated therein, is designed preferably in the form of a transportable structural unit.
