Abstract (en)
[origin: WO2018004355A1] The present invention relates to an attachment mechanism for a shoe, the attachment mechanism comprising at least two pins (1), one on each side of the shoe, where the pins (1) are arranged in their respective guides (3), the pins (1) being designed to cooperate with a complementary retaining means (12). The attachment mechanism is, inter alia, characterised in that the attachment mechanism further comprises forcing means that are designed to force the pins (1) outwards into engagement with the complementary retaining means (12), and inwards out of engagement with the complementary retaining means (12).
