Abstract (en)
[origin: WO2018001661A1] The invention relates to a torque-transmission assembly (1) for a drive train of a motor vehicle, comprising an input region (25), which can be rotated about an axis of rotation (A), and an output region (35), which can be rotated about an axis of rotation (B), wherein a torque path (M) extends from the input region (25) to the output region (35), wherein first a torsional-vibration damping unit (15) and then a transmission unit (33) are positioned between the input region (25) and the output region (35) along the torque path (M), wherein a first slip assembly (30) and/or a second slip assembly (38) is provided for producing a rotational-speed slip in the torque path (M) between the input region (25) and the output region (35) for vibration damping.
