Abstract (en)
[origin: WO2018002590A1] A packaging system for goods is provided, comprising a box (1) for holding the goods, the box having four side walls (11a-d), a front face (12) and a rear face (16). The front face comprises a wall provided with front flaps (13a-d) defining a front window (13). The packaging system further comprises either a plastic film (6) wrapped around the box, covering the front face and the rear face of the box and retaining the goods within the box; or at least one band (6) placed around the box, placed around the box so as to encircle the front face and the rear face of the box and retain the goods within the box. The front flaps provided in the front face are configured to disengage and thus allow the goods to be unloaded from the box after either the plastic film or the at least one band has been removed and the box has been turned so that the front face faces downwards.
