Abstract (en)
[origin: WO2018002721A2] A break-open single-dose package includes at least one support panel movable to fold the break-open single-dose package, a sealable pocket for storing a spreadable consumable, an applicator, and one or more grips adjacent the at least one support panel. The sealable pocket is positioned adjacent the at least one support panel and includes a frangible region adapted to form an opening through which the spreadable consumable can exit the pocket in response to folding of the break-open single-dose package. The applicator is positioned adjacent the frangible region of the pocket for permitting a user to spread any spreadable consumable that exits the pocket on a surface using the applicator without requiring the user's hand(s) to contact the spreadable consumable. The one or more grips are positioned and adapted to facilitate user control of the break-open single-dose package. Other example single-dose packages are also disclosed.
