Abstract (en)
[origin: WO2018005828A1] A system and method to manage the transitioning the care of an individual in a healthcare setting from one point of care with a particular set of characteristics to the another physical location with a different set of characteristics by providing for the retrieval of information relating to an individual by a plurality of authorized users and devices at multiple facilities. The system includes a skin wearable, waterproof, non-transferable frangible individual identification device comprising an adhesive and an ink arranged to provide a physiologically and optically perceptible, humanly understandable, and machine readable information relating to said individual.
