Abstract (en)

[origin: EP3479725A1] The present invention relates to a structurally simple compact container improved in cosmetic material-filling process, the compact container comprising: an outer container; an outer container cap hinge-coupled to one side of the outer container to open/close the outer container; a content dish mounted in the outer container so as to contain a cosmetic material therein; and a content dish cap hinge-coupled to one side of the outer container so as to open/close the content dish, wherein the content dish is configured to be coupled to the outer container from a lower side of the outer container. For filling the compact container with a cosmetic material, the cosmetic material is loaded to the content dish which is then coupled to the outer container, assembled with the outer container cap and the content dish cap, from a lower side of the outer container, thereby improving a cosmetic material-filling process, with the consequent enhancement of productivity.
