Abstract (en)

A machine and method for the treatment of a base article (4), to which a covering material (in particular, enamel) has been applied; the machine comprises a cleaning device (9), which, in turn, comprises at least one wheel (10), having a support body (11) and a peripheral layer (12), in particular comprising sponge, adapted to come into contact with the base article (4) in order to clean at least an area of the base article (4); at least one mechanical locking device (14) is provided, which is adapted to fix the peripheral layer (12) to the support body (11); the first peripheral layer (12) comprises an oblong strip, which extends around the first support body (11) and has a first and a second end (15, 16), which are arranged so as to face each other.
