Abstract (en)

[origin: EP3480206A1] Provided is a method that produces N-silylaminooalkylsilane compounds. An N-silylaminooalkylsilane compound is produced by reacting an aminoalkylsilane compound and a monochlorosilane compound in the presence of a tertiary amine compound having an acid dissociation constant ( $pK_a$ ) of 7 or higher and a polar surface area (PSA) of 12 Å<sup>2</sup> or higher. The aminoalkylsilane compound is, for example, a compound represented by formula (1). In formula (1), R<sub>1</sub> is a C<sub>1</sub>-5 alkyl; R<sub>2</sub> is hydrogen, phenyl, or 2-aminoethyl; m is 1, 2, 3, 4, or 5; and n is 0, 1, or 2. The reaction is as indicated in (ZZ).
