Abstract (en)

[origin: EP3480464A1] A co-rotating scroll compressor includes a driving-side scroll member (70), a driven-side scroll member (90), and a housing (3) that accommodates both of the scroll members (70, 90). The housing (3) includes partition surfaces (P) partitioned at a plane including both of the scroll members (70, 90) and approximately orthogonal to rotational axes (CL1, CL2) of the scroll members, and flange parts (30) that fasten the partition surfaces in a region on a periphery of the scroll members (70, 90) and on a lateral side when seen from a straight line (L1) connecting the rotational axes (CL1, CL2) of the scroll members (70, 90) to each other.
