Abstract (en)
[origin: EP3480549A1] A compact improved bug killing gun (10) includes a compressed gas source (14) fluidly connected to a chamber (18) connected to a barrel (22). A compressed gas release mechanism (30) is connected to the compressed gas source (14). A projectile storage magazine (34) stores particulate projectiles (38) and is located adjacent the chamber (18). A projectile loading mechanism (42) moves the particulate projectiles (38) into the chamber (18) from the magazine (34). A cocking mechanism (46) is mechanically connected to the compressed gas source (14), the compressed gas release mechanism (30), and the projectile loading mechanism (42). When the gun is cocked, the projectile loading mechanism loads a quantity of the particulate projectiles into the chamber. When the compressed gas release mechanism is activated the projectiles are ejected from the chamber into the barrel and expelled from the gun.
