Abstract (en)
[origin: WO2018009640A1] A product dispensing machine includes a container, a freeze circuit, a liquid circuit, a blending chamber assembly, and a dispensing assembly. The container stores a base product. The freeze circuit is constructed and arranged to extract a first portion of the base product from the container and substantially freeze the first portion into a first consistency. The liquid circuit is constructed and arranged to extract a second portion of the base product from the container. The blending chamber assembly is in fluid communication with the frozen and liquid circuits, and is constructed and arranged to blend the first and second portions into a second consistency. The dispensing assembly is in fluid communication with the blending chamber assembly, and is constructed and arranged to selectively dispense the first portion in the first consistency, and the first and second portions in the second consistency.
